

Gold Application Suite

Radio Frequency and Batch

Goldware is an application that allows you to address the needs you have today and the needs you'll have tomorrow and next year with one application.

User accessible parameters and a real-time implementation infrastructure allow for the application to change as the user requirements change.

The broadband of business criteria considered in the development of **Goldware**, when combined with the most versatile handheld product on the market, truly make the **Goldware** suite a multifunction workhorse designed to increase productivity and profit throughout the retail supply chain.

pss Goldware RF and **Goldware** Batch are a suite of applications for the PDT and PC server, designed to provide the retailer with a single solution to address all demands.
